

TasPorts Berthing Requirements **ELECTRICAL**

Power leads must have a current test & tag compliance.

Power leads must be run in a safe manner. They cannot be left across walkways or in the water.

Only 15amp power leads can be plugged into 15amp power outlets. 10amp leads cannot be used and can cause damage to outlets.

Power leads are not 'daisy-chained' across yachts. Yachts that are rafted-up are not to run power across to other yachts. Only the yacht with a specific berth allocation will have access to power.

If the use of power causes any damage to infrastructure, the cost of repairs will be charged back to yacht owner.

Security will be patrolling the marina & other berthing areas to check the above guidelines are being adhered to.

If the above requirements are not met, TasPorts reserves the right to rescind access to the power supply.
